

1. Interview Data Consolidation

- Collect all relevant insights, quotes, and findings from the interviews.
- Organize by theme (e.g., challenges, observations, suggestions) based on the objectives discussed in our earlier meetings.
- Make sure responses are accurate, complete, and unbiased—no paraphrasing unless it's for clarity, and even then, keep a version of the raw response.
- Categorize responses based on participant types (e.g., student, faculty, admin, etc.).

2. Documentation and Validation

- Start compiling a summary sheet or matrix of responses (Excel/Google Sheets recommended).
- Validate the findings against our research objectives—is each question addressed? If not, highlight the gaps.
- If anything is unclear, flag those sections for follow-up or clarification.

3. Process Flow Understanding

Everyone should study and understand the full research process, including:

- Topic approval
- Title Defense
- Proposal defense
- Data gathering
- Analysis
- Final defense
- Publication (if applicable)

Identify special cases, such as:

- Ethical clearance (for sensitive topics like health, minors, etc.)
- External collaboration (if involving non-campus stakeholders)
- Requirements if panelists request revisions or extra validation

4. **Communication Chain**

Know who contacts whom during each phase:

- proposal phase → coordinate with professor, adviser, and program chair
- Pre-defense scheduling → contact professor and program chair
- After interviews → notify adviser of data gathered
- Before final defense → inform assigned panelists with proposed dates and materials

Practice proper etiquette in addressing faculty and panelists:

- Use formal language in written communication
- Provide complete context in messages (e.g., who you are, what you're requesting, deadlines)

5. **Coordination with Ma'am Alyssa and Sir Sean**

- They'll serve as the main point of contact for organizing data and tasks.
- Update them on progress (e.g., who's done with interviews, which panelists are confirmed).
- Ask them for confirmation before sending any formal messages to faculty or admins.

6. **Panelist Coordination (Sir Ilano's task)**

Prepare individualized messages to:

- Joven
- Ma'am Amanda
- Other faculty who have participated in past research panels

Include:

- brief description of the research
- Request for availability (preferred dates or timelines)
- Thank them in advance for their time and insight

7. **Contingency Planning**

If issues arise (missing data, unresponsive panelists, etc.), document it and propose options:

- interview schedule

- Alternative panelist suggestions
- Notes for follow-up when I return

8. Learning & Documentation for Future Groups

- Take note of what works well and what doesn't during this process.
- Create a short guide or timeline that can help the next batch or team handle this more easily.
- Optional but helpful: Start a shared folder or mini knowledge base with forms, templates, etc.

9. Escalation for Urgent Decisions or Blockers

If anything unexpected happens (e.g., conflict in schedule, miscommunication with panelists, data issues, or you're unsure how to proceed), do not delay the process.

- Immediately contact me or Sir Sean for help, clarification, or a decision.
- It's better to ask than guess—especially if it affects coordination, external communication, or final outputs.
- Use Messenger, text, or any fast means to reach out if it's urgent.
